

Chromosomes with GC windows

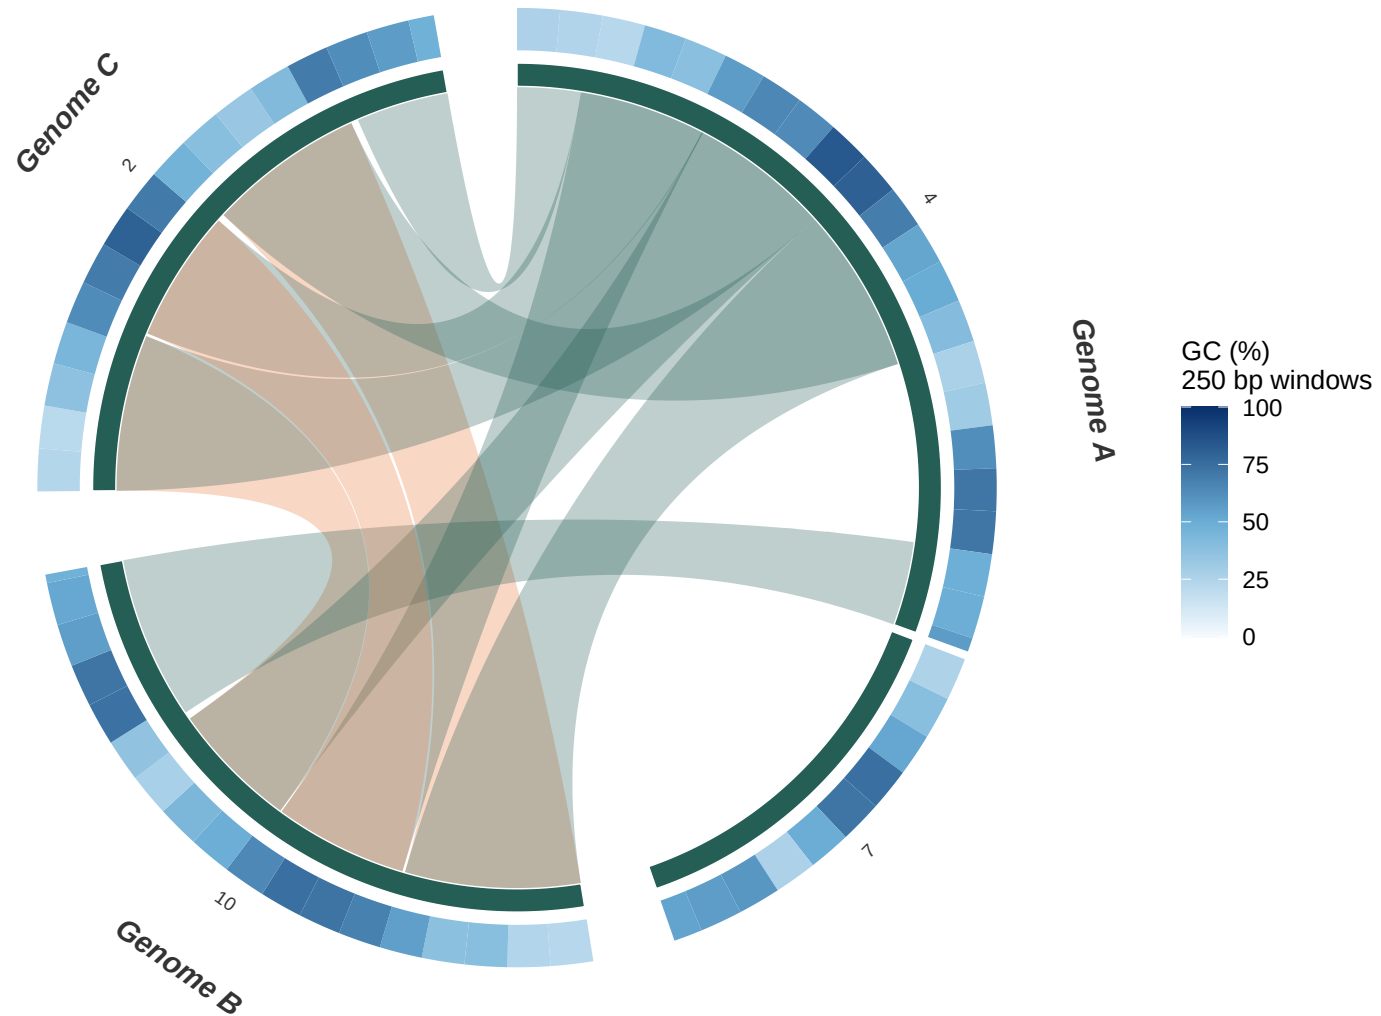

Native ggplot2 layers | optional annotation tracks

Simulated DNA on demo gene coordinates. $GC = 100 \times (G+C)/(A+C+G+T)$.
Ambiguous bases are excluded; grey tiles have no called bases.

Circular chromosomes with GC windows

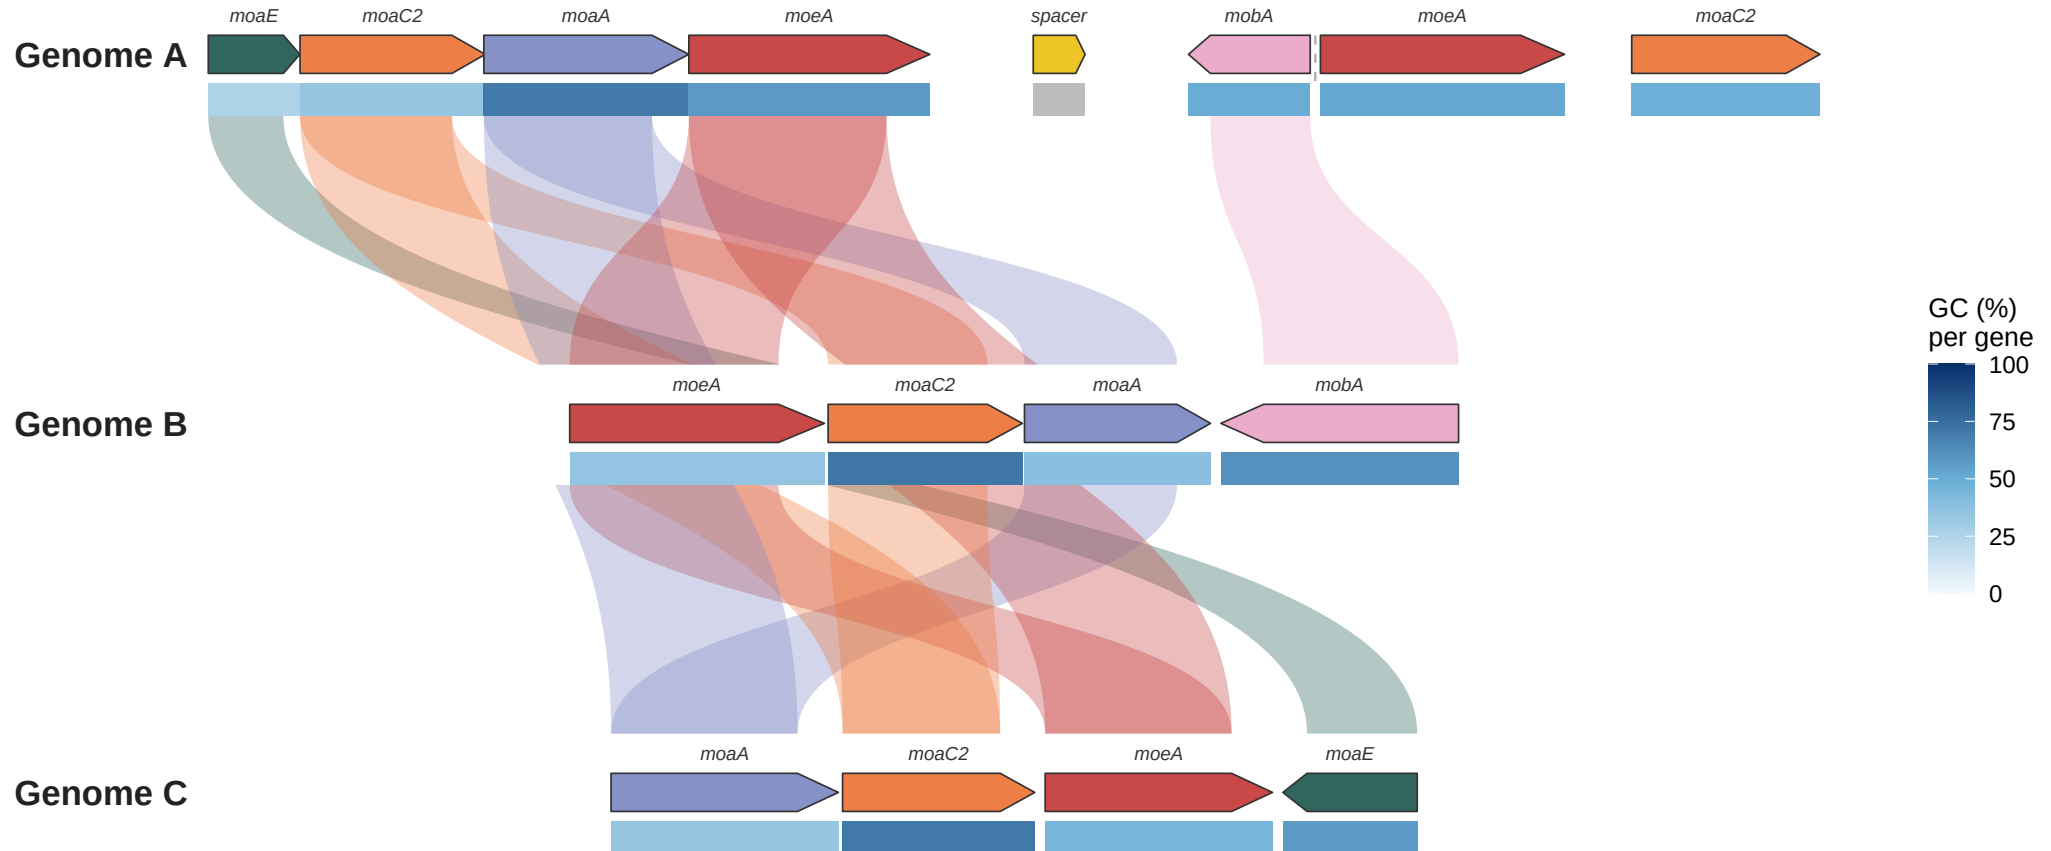

Native ggplot2 layers | optional annotation tracks

Simulated DNA on demo gene coordinates. $GC = 100 \times (G+C)/(A+C+G+T)$.
Ambiguous bases are excluded; grey tiles have no called bases.

Genes with GC tracks

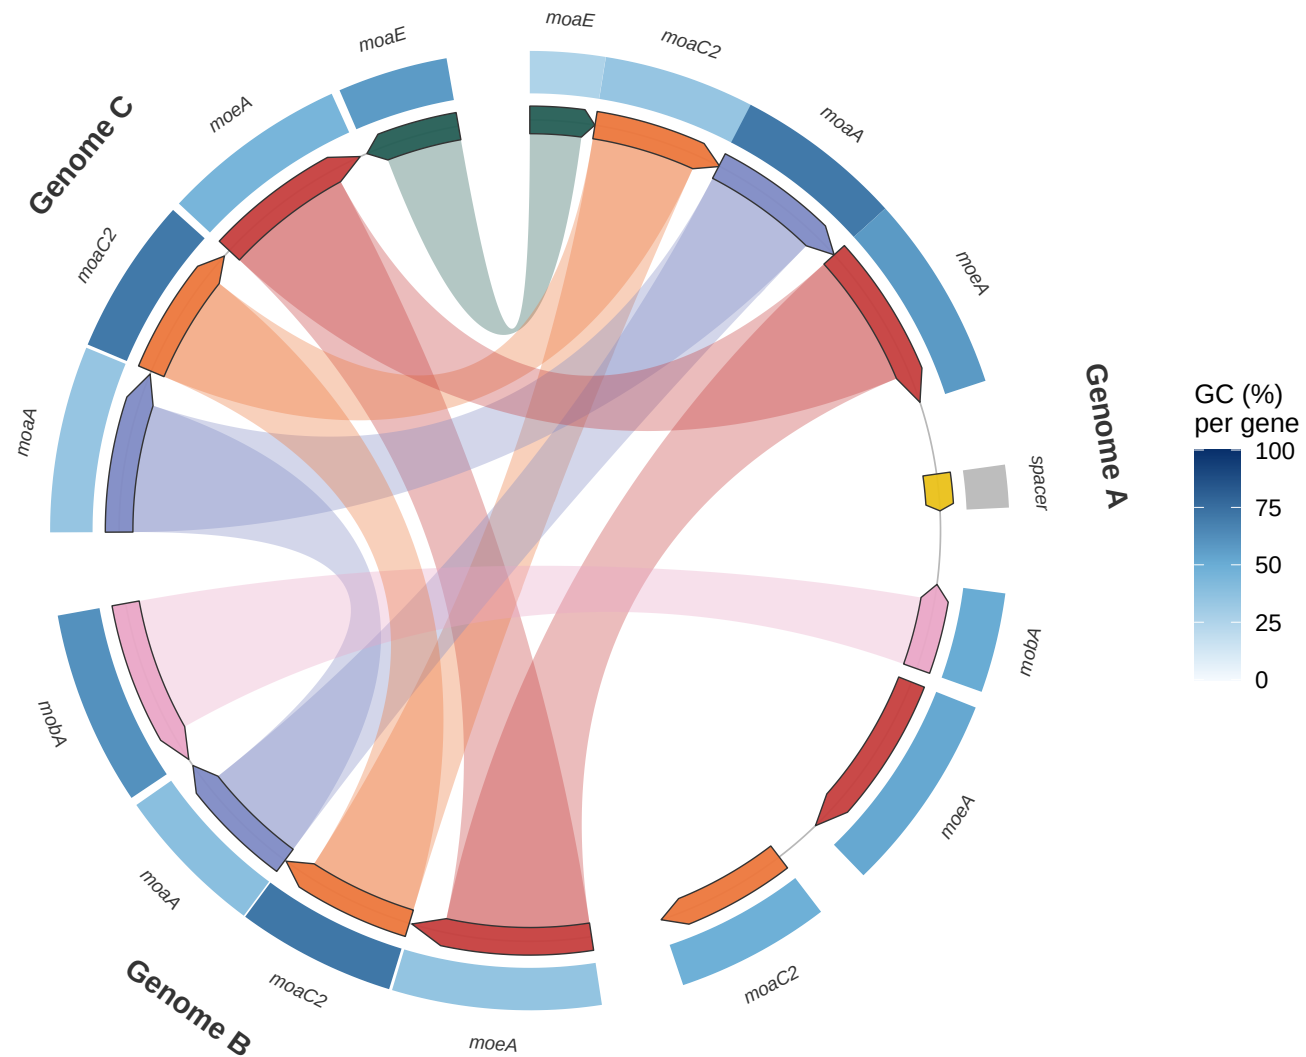

Native ggplot2 layers | optional annotation tracks

Simulated DNA on demo gene coordinates. $GC = 100 \times (G+C)/(A+C+G+T)$.
Ambiguous bases are excluded; grey tiles have no called bases.

Circular genes with GC tracks

Native ggplot2 layers | optional annotation tracks

Simulated DNA on demo gene coordinates. $GC = 100 \times (G+C)/(A+C+G+T)$.
Ambiguous bases are excluded; grey tiles have no called bases.
