

Three independent tracks above the genes

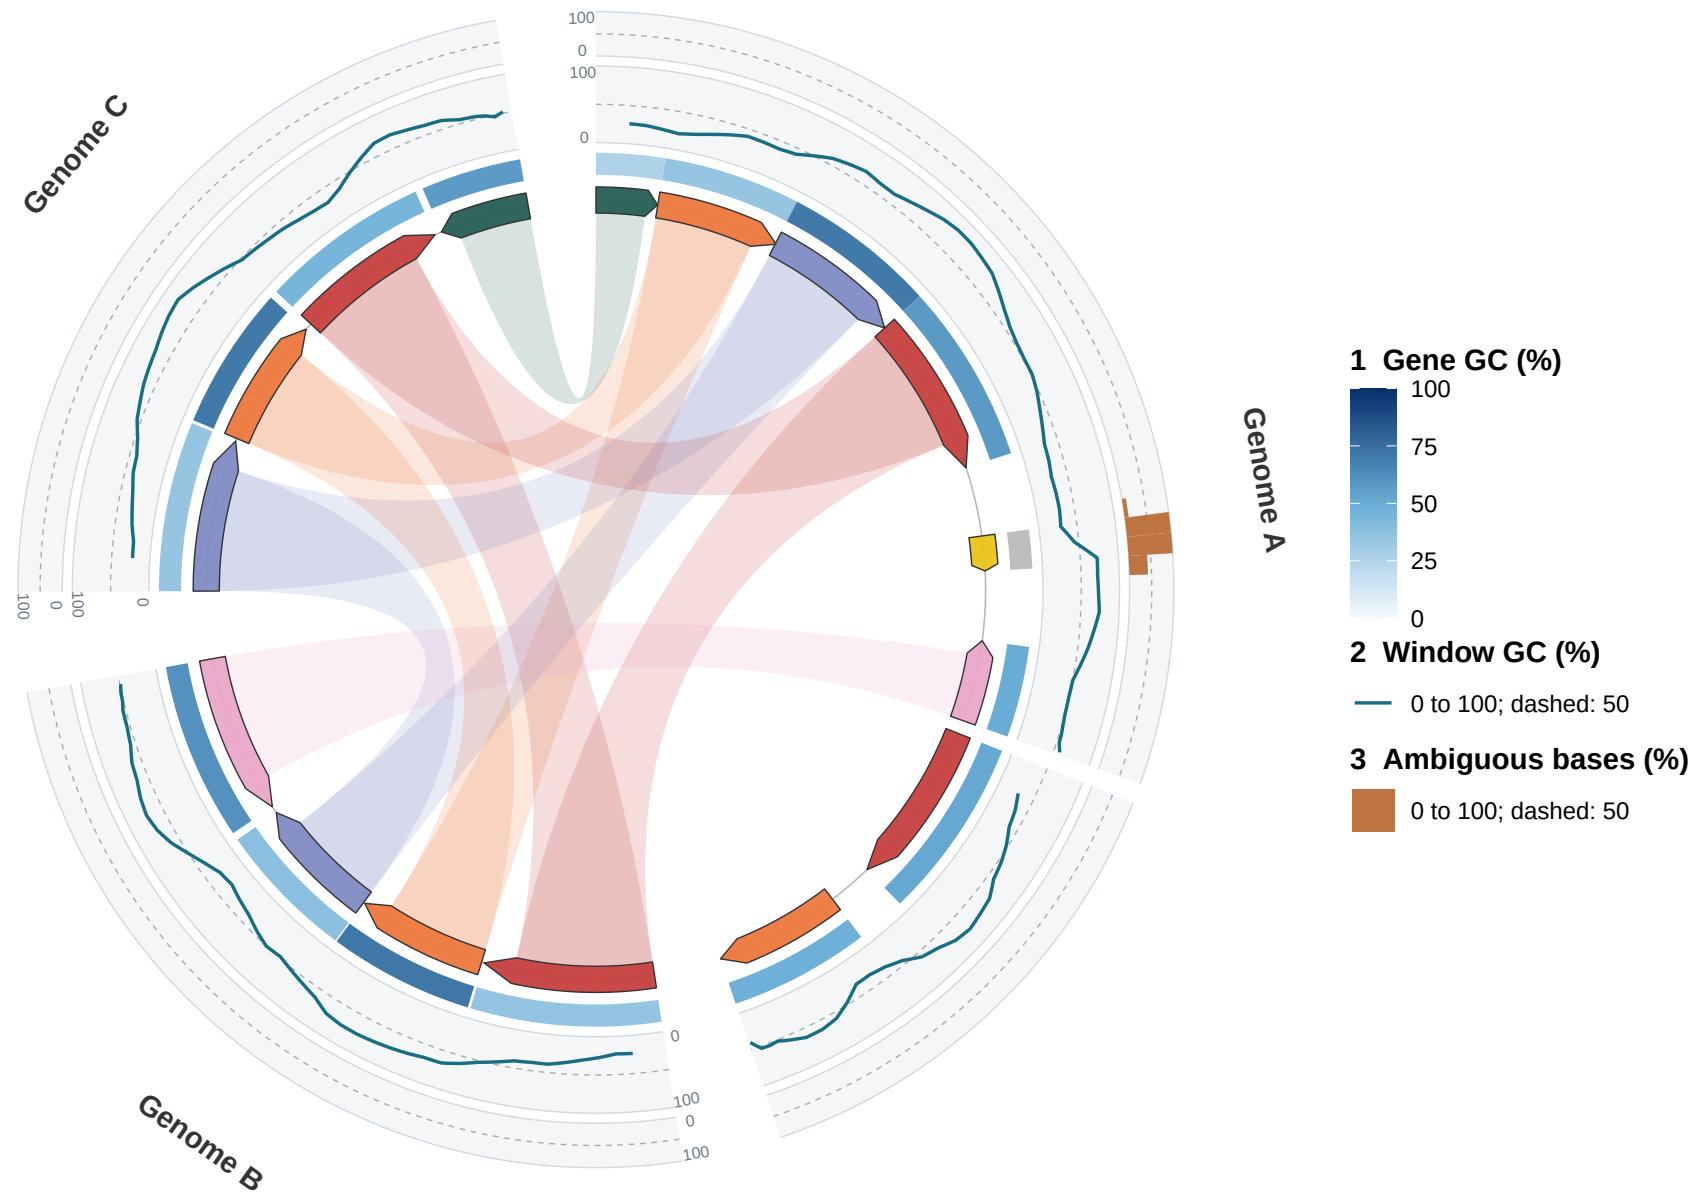

Heatmap + sliding-window line + interval bars | one shared coordinate system

Simulated DNA. Tracks from genes outward: gene GC heatmap, window GC line, ambiguous-base bars.
GC line: 400-base windows every 100 bases; dashed guide = 50%. Grey heatmap cells have no called bases.

The same three tracks around the genes

Values increase outward within each ring | each track keeps its own scale

Simulated DNA. Tracks from genes outward: gene GC heatmap, window GC line, ambiguous-base bars.
GC line: 400-base windows every 100 bases; dashed guide = 50%. Grey heatmap cells have no called bases.
