

Three hospital-associated plasmids

Annotated CDS fully inside the 2,000-10,700 bp backbone window | adjacent pairs

33 annotated CDS; 21 reciprocal-best protein links within the selected windows.
BLASTp: >=50% identity, >=70% coverage of both proteins, E <=1e-20; tied best hits excluded.
Colors identify gene names or abbreviated products; arrows show strand. HP: hypothetical protein.
